

DataNovata: The Enterprise Application Data Bridge

Features and Benefits

1. THE DATANOVATA SYSTEM

FEATURE	BENEFIT
Quickly generates custom applications to view data within any relational database	Can eliminate running costs for end-of-life and non-productive systems
Robust, easy-to-use toolkit to tailor each application as needed	Consistent, reliable, with measurable ROI and productivity gains
Integrated data from multiple sources	Simplified workflow for information governance
Flexible XML design parameters	Add functionality to both active data and data at rest
Easy-to-design screens	Provides data views to satisfy user & auditor needs
Easy to use	Users can access data without IT technical support
Low license & setup cost	Makes application decommissioning more cost-effective
Applications installed on a web server	Retrieve information from anywhere connected to the internet
Web-browser access	On-the-spot intelligence for field operators
Zero-client delivery model	Minimal resources needed for deployment/upgrades
Industry-standard SSL encryption	Trusted platform
Single sign-on capability	Strategic alignment with internal operations

2. DATANOVATA APPLICATIONS

FEATURE	BENEFIT
'Drag-and-drop' screen customization at the data view	The end user can interrogate and focus on the most relevant information with ease
Tailored to end-user specifications	Minimal UX training to familiarize users with the data
Search on any data point	Multi-dimensional views of data for rapid discovery
'Drill down/up/across' fluid navigation	Optimized application heuristics and ergonomics
Export to Excel/Word/html	Simple, one-click download
Freehand data annotations overlay	Adds contextual reference to significant data points
Bookmark data	Review prior searches effortlessly
Complete & accurate audit trail kept of data access	Know who, what, when, where and how the data was accessed
Multi-lingual/disabled accessibility	Economic rollout for universal implementation
Bulk data export	Ideal for modeling and analytics
Automated 'end-of-life' purge parameters	Cost-effective information lifecycle management

DataNovata: The Enterprise Application Data Bridge

Features and Benefits

3. DATANOVATA COMPONENTS	
FEATURE	BENEFIT
Administrator Database	Simple dashboard to set up and maintain multiple DataNovata projects
Project Setup Wizard	Defines and simplifies all the components and procedures necessary for establishing a DataNovata project for any system
Data Structure Toolkit	If logical data relationships are not documented or defined in the database this toolkit runs 'test and suggest' protocols to map the structure into the new application
Stored Procedures Recognition	High level database functions can be identified and replicated on the new host platform
Deployment Wizard	Easy-to-use implementation manager to test, target & deploy applications on different hosts
Look & Feel Editor	XML-standardized for user familiarity
